EDUCATION

UNIVERSITY OF CALIFORNIA, SANTA CRUZ

Bachelor of Science Computer Science

Santa Cruz, CA

Expected June 2026

Cumulative GPA: 3.89/4.0 (Dean's List)

Relevant Coursework: Data Structures and Algorithms, Large Language Models, Software Development, Computer Vision, Deep Learning, Reinforcement Learning, Bayesian Statistics, Computer System Design, Probability and Statistics

SKILLS

- **Languages:** Python, Java, C , C++
- **AI/ML:** LLMs, Retrieval Augmented Generation (RAG), Prompt Engineering, NLP, Deep Learning, Fine-Tuning, LoRA
- **Frameworks & Tools:** Pandas, Numpy, PyTorch, Shell Scripting, TensorFlow, Scikit-learn, MLflow, Weights & Biases
- **Data/Infra:** MongoDB, Docker, REST APIs, Google Kubernetes Engine, Cloud Resource Management
- **Dev Practices:** Git, Agile, Scrum, Linux, Jira, Microsoft Office (Excel, PowerPoint, SharePoint, Word)

WORK EXPERIENCE

SULI MACHINE LEARNING INTERN

Argonne National Laboratory

Lemont, IL

August 2025 - Present

- Developed secure, domain-specific RAG-based chatbot using Python enabling **1.8K** + researchers to query over **55K** internal documents from 2 primary data sources, solving the lack of an efficient and secure information retrieval system
- Implemented multithreading and parallel job execution for large-scale document extraction, reducing runtime by **95%**
- Achieved **20%** improvement in response accuracy from RAG pipeline by iteratively testing chunking, embeddings, database, extraction, retrieval search, and LLM components and logging results using MLflow

MACHINE LEARNING INTERN

Symmera

Campbell, CA

June 2025 - August 2025

- Developing LLM based classification model (**99% accuracy**) with Python to classify input log for primary layer of overall product
- Implemented algorithm to create training dataset for text summarization based using NLP techniques and leveraged dataset to train model-based summarization system enabling efficient, scalable text summaries
- Collaborated with senior developers to include vision and audio domains and develop AI system design plan

MACHINE LEARNING FELLOW

Brightside Health

San Francisco, CA

August 2024 - December 2024

- Collaborated with 4 peers to develop an interactive platform which converts clinical PDFs into knowledge graphs using Python for AI-assisted treatment planning
- Improved model accuracy by **26%** and reduced hallucination rate by **20%** by executing Machine Learning (ML) Lifecycle and leveraging LLM prompt engineering techniques to design task-specific prompts
- Integrated MongoDB caching to reduce API latency by **7 minutes** per request, improving scalability and reliability

PROJECTS

ADHD DIAGNOSIS

January 2025 - March 2025

- Developed ML models to predict gender and ADHD diagnosis across 4 healthcare datasets using Pandas, Scikit-Learn, and TensorFlow
- Conducted exploratory data analysis and feature engineering to derive actionable insights, reducing feature dimensionality by 99%
- Designed a custom neural network, leveraging Optuna for hyperparameter optimization, resulting in a 14% increase in accuracy

RAG FOR ALLERGEN DETECTION

September 2024 - December 2024

- Designed OCR and image annotation pipeline using Python to extract restaurant menu text and highlights specified keywords
- Deployed scalable solution using Docker containerization and GCP cloud infrastructure with Milvus vector database, enabling accessibility across all mobile platforms
